- Stone Feature Photos

Welcome everyone,

In this issue we will take a look at why our quarry face block is so popular and the various uses of our random paving products.

We also have a page dedicated to photos of other stone features, which we hope will give you some ideas and inspiration for your next project.

Again a big thankyou to all the people who have sent through photos, we have put them up on the website. Please keep them coming through.

We hope you enjoy the articles.

Quarry Face Sandstone

The natural material to build your dream...

Product In Profile Quarry Face

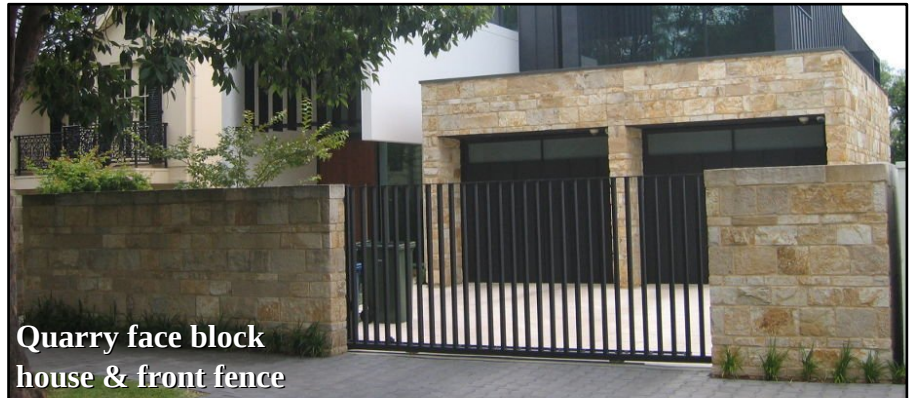

Quarry face sandstone is a naturally formed, flat-faced stone, with a wide variety of textures and colours.

These variations in colour are caused by water running through natural fractures in the stone. On the way through the water leaves trace mineral deposits, which then oxidise to produce those rich reds, browns and blacks.

As the flagship of our range, Quarry face has been one of our most popular products because it creates an "old world" cottage feel, without the hard work of having to shape the rough stone.

Although it is generally used as a building product, some creative stonemasons are utilising it in the garden, for edging, fencing or even letterboxes to match the house.

If you are interested in quarry face sandstone for your new home/extension please contact one of our stonemasons/builders (see the stonemasons link on our website) for a quote

ALLSTONE

Allstone has setup a display at their Prospect Showroom with some of our building products (including Quarry Face). So if you wish to have a closer look or place an order they will be more than happy to help you out. Check out their website for more information <http://www.allstone.com.au>.

Product In Profile Random Paving

Our random-shaped paving is 50mm thick, cut top and bottom, leaving the natural shape of the stone. We have created two sizes: one for normal paving (think paths and pool coping) and one called XL Paving mainly for stepping stones.

Our pavers are natural, quarry stone with all the traditional sandstone colours to complement your garden greenery.

They are easy to lay and can be modified to fit any area. Once laid, no sealing is necessary and little to no maintenance is required.

They have also been used as step tops, and as a capping for sawn or random wallers.

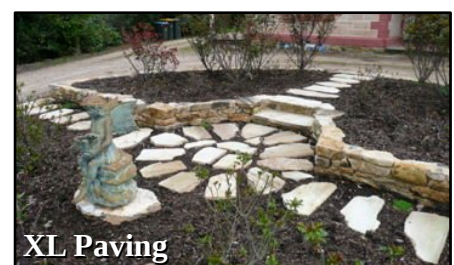

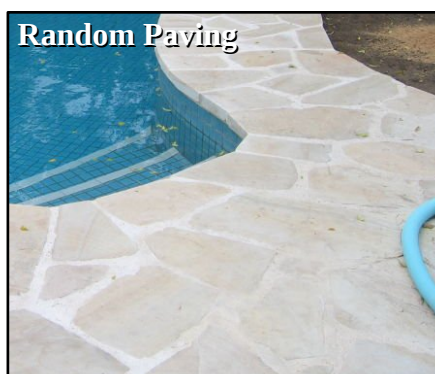

So if you want real stone for your home or garden, look no further than our beautiful Adelaide Hills sandstone.

This product is available from our local stockists who you can find on our webpage
